Summary

- 15+ years in Cards & Payments (BFSI domain) as Lead Programmer with project management experience, driving deliveries from inception through production.
- VisionPLUS specialist with deep Mainframe expertise across the full lifecycle: analysis, design, development, testing, and production support.
- Experienced in digital transformation initiatives, including transitioning legacy Mainframe frameworks to cloud-based platforms.
- Delivered credit card solutions for major banks including Citibank, HDFC, DBS, NAB, and Westpac (AU/NZ).
- Extensive onsite and offshore experience with global clients, skilled at managing expectations and ensuring high-quality deliverables.

Skills

Cards Platform: VisionPLUS (CMS, TRAMS, FAS, CDM), VisionFlex, VisionPLUS 10

Mainframe Technologies: COBOL, CICS, JCL, VSAM, DB2

Software Tools: IBM Utilities/ISPF, File-AID, File Manager, TWS/OPC

API & Integration: VisionPLUS APIs / Functional Services, SOAP web services, z/OS Connect (exposing CICS/COBOL programs as REST

Education

Andhra University
Master of Computer Applications (MCA)

2008

Experience

Synechron Technologies Private Ltd
Associate Specialist - Technology

Oct 2024

Capgemini Technology India Pvt Ltd
Manager

Sep 2023 - Oct 2024

Tata Consultancy Services Limited
Assistant Consultant

Feb 2019 - Sep 2023

Wipro Technologies
Senior Software Engineer

Feb 2013 - Feb 2019

VIT Consultancy Pvt Ltd
Senior Software Engineer

Sep 2010 - Feb 2013

Awards

- Awarded by Thames Water's DM and Metering teams for innovating automated tools that improved team productivity and simplified the exception-handling process.
- Received multiple client appreciations, including direct recognition from clients during onsite engagements, for quality delivery and issue resolution.

Certifications

- Vision PLUS Base I Training
- Vision PLUS Base II Training

Projects

Westpac AU/NZ, DBS Bank, HDFC Bank — Senior Developer / Technical Lead

- Led the migration of core card systems from VisionPLUS to VisionFlex across three major banks, delivering a seamless transition with minimal operational disruption — from CICS environment assessment through design, integration, testing, and post-migration support.
- Designed and developed Lite UI services using VisionPLUS Atomic and Functional Services (APIs), converting legacy CICS online screens into modern UI components integrated with existing card systems.
- Provided solution planning and estimation for programs and projects, partnered with business teams on functionality validation, and delivered technical guidance and training to support teams and end users.

Citibank / USL Edge — NAB, Australia — Techno-Functional Consultant

- Played a key role in NAB's acquisition of Citibank Australia's unsecured lending business, enhancing VisionPLUS CMS to bridge system gaps for the cards portfolio migration — covering card renewal, early renewal, lost/stolen processing, reinstatement, and temporary/permanent credit limit management.

APIs), CICS Web Services, IBM MQ, JSON, XML

API Management & Testing: IBM API Connect, Postman, SoapUI, Swagger

- Drove the Visa-to-Mastercard product migration at card level, gathering requirements, preparing functional specifications, and delivering solution design and estimates for the enhanced card lifecycle functions in the NAB system.
- Resolved critical production issues during migration, compiled and executed test cases with business teams to validate application functionality, and provided ongoing technical support across implementation and post-migration analysis.

Smart Metering Program — Thames Water, UK — Senior Developer & SME

- Served as SME and Senior Developer for Thames Water's smart metering program on IBM Mainframe (Pro 3.1 / Experian platform), designing and delivering enhancements across CIS, JMS, and Merlin applications for meter transition work management, fixed network integration, and component replacement.
- Led end-to-end delivery — from detailed design specifications through coding, unit testing, SIT/UAT support, implementation, and warranty — while allocating work across the team, reviewing deliverables, and coordinating SIT with interfacing teams; consistently delivered all components on schedule.
- Fine-tuned long-running batch jobs, significantly reducing CPU usage and batch cycle completion time (client-appreciated achievement); designed batch schedules, backup/restore-rerun procedures, and implementation-time initializations across regions.

HSBC Credit Card Flip — Krungsri Ayudhya Card Co. (KCC), Thailand — Developer

- Developed VisionPLUS CMS enhancements for the migration of HSBC's credit card portfolio to KCC (via Bank of Ayudhya), supporting the card "flip" process required to retire HSBC branding within the contractual timeline.
- Built card upgrade and OTB (Open-to-Buy) calculation logic for key flip strategies — upgrading HSBC cards to KCC, renewing cards under KCC card face with HSBC BIN, and OTB transfer for cardholders with existing KCC accounts.
- Owned changes end-to-end: analyzed functional specifications, prepared technical documents, identified impacted components, developed and unit tested enhancements, drove implementation with business confirmation, and provided post-implementation support through handover to production.

G2C Deployment Services — Citibank — Batch Support Engineer / Defect Management

- Managed end-to-end defect lifecycle for Citi's Rainbow projects (GCT applications) across SIT, UAT, and PAT — triaging by severity, assigning tickets across L1/L2/L3 and environment support teams, tracking to closure with root cause analysis, and escalating SLA breaches.
- Monitored and supported production batch runs across multiple Citibank business units, resolving ABENDs and production incidents for the India region raised on behalf of customers.
- Drove batch tuning and performance improvement initiatives that contributed to cost-saving programs; tracked defect progress in Quality Center and prepared weekly status reports (WSR) for stakeholders.
